*Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 4 and 26-34, drawn to a method for preparing a blood sample, classified in class 435, subclass 40.5, for example.
- II. Claims 39-46, drawn to a method for preparing a fresh human whole blood sample, classified in class 435, subclass 173.7, for example.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation and different effects. Because the reagent for preparing the blood sample contains different components, it would be expected to have a different effect.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification above, and because the search required for Group I is not coextensive with the search required for Group II, restriction for examination purposes as indicated is proper. Furthermore, searching Groups I and II together would pose a serious burden.

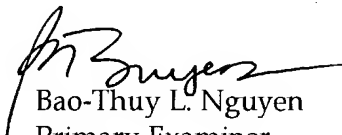

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
